# HEAP / PRIORITY QUEUE

# Heap

- Heap is a complete binary tree that satisfy the heap property (max or min)
- Min heap: root node contains the minimum value
- Max heap: root node contains the maximum value

# Heap in C++

### Two main ways to implement:

1. Using std::make\_heap from <algorithm>

```
std::make_heap(RandomIt first, RandomIt last)
std::push_heap(RandomIt first, RandomIt last)
std::pop_heap(RandomIt first, RandomIt last)
std::sort_heap(RandomIt first, RandomIt last)
```

2. Using std::priority\_queue from <queue> (recommended)

```
std::priority queue<T, Container, Compare>
```

# Heap in C++ - std::priority\_queue example

### Min heap

```
std::priority_queue<int, std::vector<int>, std::greater<int>>
May boan
```

```
Max heap
std::priority_queue<int> or
std::priority queue<int, std::vector<int> std::less<int>>
// Min heap
std::priority queue<int, std::vector<int>, std::greater<int>> minHeap;
minHeap.push(3);
minHeap.push(6);
minHeap.push(4);
// remove top element (3)
minHeap.pop();
// root node (top) is now 4
std::cout << minHeap.top();</pre>
```

leetcode.com/problems/kth-largest-element-in-an-array

#### **Problem**

- You are given an array of integers nums and an integer k
- Find the **k**<sup>th</sup> largest element
- Example:

### Input

nums = 
$$[3, 2, 1, 5, 6, 4]$$

$$k = 2$$

Output: 5

# Solution - 215. Kth Largest Element in an Array

leetcode.com/problems/kth-largest-element-in-an-array

#### **Solution**

- Start with a min heap
- Loop through the **nums** array:
  - Add the element to the min heap
  - Check if the size of the heap is always less than  $\mathbf{k}$ . If the size is greater, pop the minimum element
- Return the element from the top: the k<sup>th</sup> largest element

```
LeetCode
```

leetcode.com/problems/kth-largest-element-in-an-array

```
Code Time: O(n log k) Space: O(k)
```

```
int findKthLargest(vector<int>& nums, int k) {
    std::priority_queue<int, std::vector<int>, std::greater<int>> minHeap;
    // O(n)
    for (const auto& num : nums) {
        // O(log k) since the heap is bounded to k elements
        minHeap.push(num);
        if (minHeap.size() > k) {
            minHeap.pop();
        }
    }
    return minHeap.top();
}
```

#### **Problem**

- You are given an array of numbers and an integer k
- Return an array with the k most frequent elements

Example

### Input:

```
nums = [1,1,1,2,2,3], k = 2
```

#### **Output:**

[1,2]

#### Solution (1) - hashmap + array sort

Go over the array, count the numbers and store them in an unordered\_map

### **Example:**

```
nums = [1,1,1,2,2,3], k = 2
freq[1] = 3
freq[2] = 2
```

- Go over the unordered\_map, add to an array and sort descending
- lacktriangle Create another array adding the **k** first elements and return

# **Code – 347. Top K Frequent Elements**

**E** LeetCode

leetcode.com/problems/top-k-frequent-elements

#### Code (1) Time: O(n log n) Space: O(n)

```
vector<int> topKFrequent(vector<int>& nums, int k) {
   // 1. Create the number's frequency map
   // O(n)
   unordered map<int, int> freq;
   for (const auto& num : nums) {
        freq[num] += 1;
   // 2. Create an array with the frequencies
   vector<pair<int, int>> freqVec(freq.begin(), freq.end());
   // 3. Sort by the frequency O(n log n)
    sort(freqVec.begin(), freqVec.end(), [](auto& a, auto& b) {
            return a.second > b.second;
            });
   // 4. Create the result with the k first elements
   // 0(k)
   vector<int> result;
   for (int i = 0; i < k; ++i) {
        result.push back(freqVec[i].first);
   return result;
```

#### Solution (2) - hashmap + min heap

Go over the array, count the numbers and store them in an unordered\_map

### **Example:**

```
nums = [1,1,1,2,2,3], k = 2
freq[1] = 3
freq[2] = 2
...
```

- Go over the frequencies, add to a min heap. If the size of the heap exceeds  $\mathbf{k}$ , remove the top one (the minimum value)
- Create another array result adding all elements from the heap and return it

# **Code – 347. Top K Frequent Elements**

**E** LeetCode

leetcode.com/problems/top-k-frequent-elements

#### Code (2) Time: O(n log k) Space: O(n)

```
vector<int> topKFrequent(vector<int>& nums, int k) {
    // 1. Create the number's frequency map
   // O(n)
    unordered map<int, int> freq;
    for (const auto& num : nums) {
        freq[num] += 1;
    // 2. Create the min heap with priority queue
   // O(n log k)
    priority queue<pair<int, int>, vector<pair<int,int>>, greater<>> minHeap;
    for (const auto& [num, count] : freq) {
        minHeap.push({count, num});
        if (minHeap.size() > k) minHeap.pop();
    // 3. build the result
    vector<int> result;
    while (!minHeap.empty()) {
        auto num = minHeap.top().second;
        minHeap.pop();
        result.push back(num);
    return result;
```

#### Solution (3) - hashmap + bucket sort

Go over the array, count the numbers and store them in an unordered\_map

### **Example:**

```
nums = [1,1,1,2,2,3], k = 2
freq[1] = 3
freq[2] = 2
...
```

Create buckets for each frequency and add the corresponding numbers:

```
bucket[1] = [3] \rightarrow 3 only appears once in nums
bucket[2] = [2] \rightarrow 2 appears twice
bucket[3] = [1] \rightarrow 1 appears three times
```

Go over each bucket, add to the result and return it

# **Code – 347. Top K Frequent Elements**

```
LeetCode
```

leetcode.com/problems/top-k-frequent-elements

#### Code (3) Time: O(n) Space: O(n)

```
vector<int> topKFrequent(vector<int>& nums, int k) {
    // Create the number's frequency map
    unordered map<int, int> freq;
    for (const auto& num : nums) {
        freq[num]++;
    // create the buckets
    // e.g. [[1,2,3],[4,5,6]] ...
    vector<vector<int>> buckets(nums.size() + 1);
    for (const auto& [num, count] : freq) {
        buckets[count].push back(num);
    // go over each bucket to build the result
    vector<int> result;
    for (int i = buckets.size() - 1; i >= 0; --i) {
        for (const auto& num : buckets[i]) {
            result.push back(num);
            if (result.size() == k) return result;
    return result;
```

# Problem – 347. Top K Frequent Elements

leetcode.com/problems/top-k-frequent-elements

#### Some considerations

- Theoretically, bucket sort should be the fastest solution O(n) < O(n log k)</li>
- In practice, min heap end up being faster:
  - fewer allocations: priority\_queue stores flat pairs rather than inner vectors
  - better cache locality: heap is built over a single array (binary heap)
  - if **k** is small, heap touches fewer elements
